AĞ TABANLI TEKNOLOJİLER VE UYGULAMALARI

PERSONEL KAYIT UYGULAMASI

Mesut TÜRKMEN

18291020

Bu projede MsSQL veri tabanı ve asp.net teknolojilerini kullanarak full-stack bir web uygulaması tasarladım.

Bu projede öğrenci ve personel bilgilerinin bir veri tabanında tutulduğu ve gerektiği zaman ekleme, silme gibi işlemlerin yapıldığı bir full-stack asp.net projesidir. Yukarıdaki görselde öğrenci ve personelin login ekranları yer almaktadır.

Yukarıdaki kod anasayfanın tasarım kodudur. Bu sayfanın backend kodu ise aşağıdaki görseldedir.

```
See the following large product of the following between the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the contr

Burada yanlış bilgi girildiğinde uyarı doğru bilgiler girildiğinde ise ilgili sayfaya yönlendirme yapmaktadır.

Bu kısımda ise öğrenciler kendini veritabanına kaydetme işlemi gerçekleştiriyor.

```
| Part | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company | Company
```

Yukarıdaki kodda veri tabanındaki tabloya öğrenci bilgilerinin nasıl eklendiği ve veritabanı bağlantı kurma kod parçaları mevcuttur.

Veri tabanındaki StudentMst adlı tabloda kayıt yapılan 4 öğrencinin yukarıdaki görselde gözükmektedir. Öğrencilerin name, email, mobile, image, course, address, city, pincode, username, password gibi bilgiler tıpkı kayıt sayfasında girildiği gibi veri tabanına eklenmiştir. Aynı şekilde staff bilgileri de öğrenciler gibi veri tabanına eklenebiliyor aşağıdaki görsellerde hem veritabanında hem de arayüzde staff bilgileri görülüyor.

Veri tabanındaki tablodan staff bilgilerini çektiğim c# kodu aşağıdaki gibidir.

Tüm bu çalışanların öğencilerin bilgilerinin yönetildiği admin bölümü ise veri tabanındaki yönetim işlerinin hepsini yapabilme özelliğine sahiptir.

Admin login ekranına bilgileri girdikten sonra aşağıdaki görseldeki ekrana yönlendirilir.

Bu ekranda staff ların branch bilgileri eklenip siliniyor. Veritabanında bu bilgilerin olduğu tablo aşağıdaki gibidir.

Veritabanına branch eklediğimiz ve sildiğimiz c# kodu aşağıdaki gibidir. Fonsksiyon isimlerinden de anlaşıldığı üzere add ve delete anahtar kelimeleri hangi fonksiyon olduğunu anlamaya yardımcı oluyor.

Admin ayrıca kendisi staff ekleme özelliğine sahiptir. Bu ekran aşağıdaki gibidir.

Bu ekrandaki bilgileri girerek staff bilgilerini veri tabanına kaydediyoruz. İlgili veritabanı kodu aşağıdaki gibidir.

```
The composition of the part of the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the found show the f

Admin aynı zamanda staff ile ilgili feedback leri görüntüleyip silme özelliğine de sahip. İlgili ekran aşağıdaki gibidir.

Admin aynı zamanda bu feedback leri veritabanındaki tablodan da silebilme özelliğine sahiptir. Bu tablo aşağıdaki görselde görüldüğü gibidir ve bunun backend kodu ise görselin aşağısındadır.

Tüm bu işlemleri veritabanında yapabilmek için konfigürasyon dosyası olan web.config dosyasıdır. Connection string tag leri arasına veri tabanı bilgilerini ekledikten sonra veri tabanıyla etkileşim kurabiliyor oluyorsunuz.
